

CMS pro _{m2} Upgrade 3.65

NOTE: PLEASE COMPLETE ALL THE STEPS TO UPGRADE CMS PRO _{m2} TO V.3.65

In order to upgrade to v3.65, you must have already installed v3.60+.

Please note that some of your files including admin area will be replaced during upgrade process. However your database will be preserved.

1. Backup Your Database

2. Make sure you have full site backup.

4. Unzip upgrade.zip into your CMS pro _{m2} directory

3. Open your browser and point to <http://yourdomain.com/upgrade.php>

where yourdomain.com is the name of your domain. If you've installed CMS pro! In other than root directory of your domain, than just add your install directory after <http://yourdomain.com/> e.g.: <http://yourdomain.com/cmsdirectory/upgrade.php>

4. Once install completed you'll see the message:
Installation Completed. Please delete **upgrade.php**
Make sure you delete the file.

New twitter Api:

1. Create Twitter Application

Twitter's API v1.1 requires all transactions to be authorized by user context. This means that in order to use new twitter plugin you will need to create a Twitter application to obtain a consumer key, consumer secret, access token, and access token secret. These are used to authenticate your application via OAuth.

After logging into <https://www.dev.twitter.com/>, navigate to <https://dev.twitter.com/apps/new> and enter the requested information.

2. Once you have successfully created an application, navigate to the bottom of the page and click "Create my access token". This is required to query for a user's tweets on their timeline.

3. And you're done! You can view your keys on the "Details" tab of your application.

4. Enter your twitter credentials in twitter configuration page in plugin menu.

The first time you access page which contains twitter plugin a cached copy of your recent twitts will be created, and will be updated every hour, in order to prevent hourly limitation introduced in new api.

For more info see here: <https://dev.twitter.com/docs/rate-limiting/1.1/limits>

You can however increase/decrease how often a copy will be cached in `/admin/plugins/twitts/admin_class.php`

Line 46:

```
'cache_life' => 3600,
```

3600 = 3600 seconds = 1 hour
